Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-column Parking Lift competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Multi-column Parking Lift production reached approximately 95000 units, with an average global market price of around US\$ 13250 per unit. Multi-column parking lifts are a type of mechanical parking system specifically designed for urban multi-story parking facilities. They utilize the coordinated operation of multiple columns and a lifting platform to enable multi-level parking and retrieval of vehicles. They significantly increase parking capacity per unit area, alleviating urban parking challenges and are widely used in commercial complexes, residential communities, public parking lots, and transportation hubs.

Core Structural Features

Column System: Made of high-strength steel, it offers excellent load-bearing performance and long fatigue life.

Lifting Platform: Hydraulically or electrically driven, it offers strong load-bearing capacity and smooth operation.

Drive System: Mostly utilizes a motor + chain or hydraulic drive, offering low energy consumption and safety features.

Control System: PLC intelligent control, supporting one-card or license plate recognition management.

Safety Devices: Equipped with anti-fall devices, limit switches, and overload protection to ensure operational reliability.

Product Types and Selection Recommendations

Two-story multi-column lift: Relatively simple structure and low cost. Suitable for small and medium-sized residential areas and office building parking lots.

Multi-story multi-column lift: Expandable to 3-6 floors, offering high parking density. Suitable for public parking facilities such as large shopping malls, hospitals, and transportation hubs.

Single-Line Production Capacity

A typical multi-column parking lift production line has an annual production capacity of approximately 3,000-6,000 units, depending on the level of automation and plant size. High-end manufacturing companies can achieve an annual

production capacity of over 8,000 units per line through modular production and flexible assembly. Key Growth Drivers Accelerating urbanization is driving continued growth in public and residential parking demand. Land scarcity is driving the widespread adoption of multi-story parking systems. Governments are implementing parking facility subsidies to support smart parking deployment. Parking demand is rapidly increasing in key areas such as transportation hubs and hospitals. Regional Market Structure (2024) North America accounts for 22%, with growing demand for high-end commercial parking, emphasizing intelligence and safety. Europe accounts for 24%, with urban land scarcity and governments promoting green mobility and multi-story parking garages.
