## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-Core Switch Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multi-Core Switch Chip is a core network processor designed for data centers, enterprise networks, and high-end communication systems, integrating a multi-core architecture to provide enhanced data processing capability. It supports high-speed data forwarding, low latency, and high reliability, meeting the demands of large-scale port management and multi-protocol processing, serving as an essential foundational component in network switching architectures. In 2024, the production of Multi-Core Switch Chip was 30.99 million units with an average price of 7.1 USD per unit. The single-line annual capacity was approximately 0.1 million units, and the average gross margin was about 43%. Upstream materials and equipment include wafers, substrates, and packaging materials, as well as precision manufacturing tools such as lithography machines, etchers, and ion implanters, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu, ASML, Applied Materials, Lam Research, and Chinese suppliers such as Shanghai Silicon Industry Group, AMEC, and JCET. The midstream focuses on chip design and process implementation, covering physical layer IP integration, high-speed data processing circuit design, packaging and test flow development, and performance and reliability verification. Downstream applications target data centers, industrial automation, consumer electronics, and automotive sectors with representative customers including Cisco, HPE, ABB, Rockwell, Huawei, and SAIC Motor.
