Abstracts

The Multi-Domain SoC is a significant innovation in the automotive industry driven by the architectures of Software-Defined Vehicles (SDV) and Electric Vehicles (EV). It primarily employs the integration of multiple SoC chips, consolidating different domain controls into a single unit, which consists of multiple SoCs or MCUs. Each chip supports different functions. This chip integrates multiple functional domains, such as Advanced Driver Assistance Systems (ADAS), In-Vehicle Infotainment (IVI), and gateway applications, aiming to enhance the vehicle's computing efficiency, safety, and user experience. Especially with the development of cabin-driving integrated chips, the rapid evolution of Service-Oriented Architecture (SOA) technology, the increasing demand from OEMs for cost optimization, and the growing user requirements for intelligent functions, the combined influence of these multiple factors is accelerating the mass production and application of single-chip cabin-driving integration.

The global Multi-Domain SoC market size was estimated at USD 285.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.80% during the forecast period.
