Abstracts

Multi Drug Screen Dip Card is a rapid diagnostic tool used for the qualitative detection of multiple drugs and their metabolites in human urine samples, typically featuring several test strips on a single card, each targeting specific substances such as amphetamines, cocaine, opiates, cannabinoids, benzodiazepines, barbiturates, methadone, or phencyclidine (PCP), and operating on the principle of competitive immunoassay where the presence of a drug above a predetermined cutoff concentration inhibits the formation of a colored line, indicating a positive result. These devices are widely utilized in workplace testing, clinical settings, rehabilitation centers, law enforcement, and home use due to their non-instrumented design, ease of use, quick results (often within minutes), portability, and cost-effectiveness, though they are generally employed for initial screening purposes with confirmatory testing recommended for definitive results.

The global Multi Drug Screen Dip Card market size was estimated at USD 412.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
