Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi Element Gas Container (MEGC) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Multi-Element Gas Container (MEGC) is a large transport and storage unit designed to safely carry compressed or liquefied gases in bulk. It consists of multiple pressure vessels (cylinders or tubes) that are permanently mounted within a frame, forming an ISO-compliant container structure for intermodal transport. MEGCs are commonly used to transport industrial gases such as hydrogen, oxygen, nitrogen, helium, and natural gas by road, rail, and sea. Compared with single-cylinder transport, MEGCs provide higher payload efficiency, reduced handling costs, and improved safety compliance under international regulations such as ADR, RID, and IMDG Code. In 2024, global Multi Element Gas Container (MEGC) sales reached approximately 3000 units, with an average global market price of around US\$ 25262 per unit.

The global Multi Element Gas Container (MEGC) market size was estimated at USD 75.78 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
