Abstracts

Multi focus objectives are advanced optical components primarily used in microscopy and imaging systems, enabling users to observe and analyze samples at multiple focal planes simultaneously or in rapid succession without manual adjustment. These objectives integrate specialized optical designs, such as diffractive optical elements or segmented lens systems, to split or manipulate light paths, allowing for the capture of data from different depths within a specimen. They are essential in applications requiring high-resolution 3D imaging, real-time focus tracking, or automated z-stack acquisition, particularly in life sciences, materials science, and industrial inspection, where precision, efficiency, and reduced phototoxicity or sample damage are critical.
