### Report Overview

Advanced Drive Assist Systems (ADAS) refer to technologies that control mechanical devices by recognizing and judging situations that may occur during autonomous driving, which include Lane Keeping Assist System (LKAS), Surround View Monitor (SVM), and Smart Cruise Control (SCC). With the advancement of vehicle functions, the number of high-performance semiconductors and components mounted inside the vehicle is gradually increasing. In particular, autonomous vehicles require reliable energy (power) supply and signal noise removal for various chips to receive signals quickly, and small-size and high-capacity MLCCs are required due to the lack of mounting space with the increasing number of components.
