Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-layer Coextruded Tubes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multi-layer Coextruded Tubes are a type of composite packaging material manufactured using advanced co-extrusion technology. This process simultaneously extrudes multiple types of polymers with different properties in a molten state, forming a multi-layered tubular structure. This design cleverly combines the advantages of each layer: the inner layer focuses on sealing compatibility, the middle layer provides high barrier properties, and the outer layer ensures printability and mechanical strength. Its core value lies in providing superior protection for the contents, effectively blocking oxygen and moisture and maintaining product stability, while also offering aesthetic appeal and user-friendly features. It is an important packaging solution for high-end cosmetics, pharmaceuticals, and food products. The supply chain for multi-layer coextruded tubes clearly demonstrates its characteristics as a technologically advanced packaging product. The upstream core is the chemical industry, supplying basic raw materials such as polyethylene, polypropylene, and EVOH barrier resins. The midstream stage is crucial for value creation; tube manufacturers use sophisticated co-extrusion blow molding equipment and processes to combine the multi-layered materials, and perform further processing such as printing and assembly. The technical challenges lie in material formulation, interlayer bonding, and precision control. Downstream, the product directly serves brands in industries such as cosmetics, pharmaceuticals, and high-end food, which have high standards for packaging barrier properties, functionality, and design. This supply chain is driven by basic materials, with value concentrated in the midstream companies that possess strong R&D capabilities, precision manufacturing, and customized service capabilities, ultimately meeting the

comprehensive needs of the end market for product protection, brand differentiation, and consumer experience. When orders reach several thousand units, the price per tube is approximately \$0.06-\$0.10, with a gross profit margin of 20% to 35% and a capacity utilization rate of 65% to 85%.

The global Multi-layer Coextruded Tubes market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
