Abstracts

Multi layer poultry cages are vertically stacked housing systems designed to maximize space efficiency in commercial egg and poultry meat production, typically constructed from galvanized steel wire mesh and incorporating integrated features such as feeding systems, water lines, manure removal belts, and egg collection mechanisms to automate operations and improve hygiene. These systems are categorized based on the number of tiers (e.g., 3-tier, 4-tier, or higher), bird type (layers, broilers, or breeders), and automation level, with advancements focusing on animal welfare compliance, energy efficiency, and data integration for precision farming. The adoption of multi layer cages is driven by the need to optimize land use, reduce labor costs, enhance biosecurity, and meet rising global demand for poultry products, though designs increasingly balance productivity with regulatory and consumer expectations for ethical farming practices.

The global Multi Layer Poultry Cage market size was estimated at USD 2450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.65% during the forecast period.
