Report Overview

A laser diode is an electrically pumped semiconductor laser that produces coherent light when the current flows through a p n junction. Laser diodes have single-mode and multi-mode design configurations. Among these, multi-mode laser diodes have a larger emitting area, which offers higher power. Also, it offers a wide surface area at the facet, which reduces the intensity of catastrophic optical damage. Moreover, low rise time and high pulse energy of multi-mode laser diodes make them a preferred choice for use in high-resolution sensing applications in harsh environments
