Abstracts

A Multi Mode Surface Mount Device (SMD) Laser Diode is a semiconductor laser component designed for surface mounting directly onto printed circuit boards (PCBs), characterized by its ability to emit multiple transverse optical modes simultaneously. This multi-mode operation results in a relatively broad output beam with higher power output compared to single-mode diodes, making it suitable for applications requiring high-intensity illumination over short to medium distances rather than highly focused, long-range precision. These devices are engineered for compact integration, thermal efficiency, and reliability in automated assembly processes, commonly utilized in areas such as fiber optic communications for short-haul data transmission, industrial sensing and alignment systems, medical equipment for therapeutic or diagnostic purposes, barcode scanners, laser pointers, and consumer electronics where robust, efficient light sources are needed without the coherence requirements of single-mode lasers.

The global Multi Mode Smd Laser Diode market size was estimated at USD 820.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
