Abstracts

Multi parameter simulators are sophisticated medical training devices designed to replicate the physiological parameters of a human patient, including but not limited to heart rate, blood pressure, oxygen saturation, respiration rate, and temperature, in order to provide realistic clinical scenarios for healthcare professionals and students to practice diagnosis, treatment, and emergency response in a risk-free environment. These simulators are programmable to mimic a wide range of conditions?from stable vital signs to critical, rapidly deteriorating states?and are integrated with advanced software that allows instructors to control and monitor trainee interactions, record performance metrics, and provide feedback, thereby bridging the gap between theoretical knowledge and practical application in medical education and continuing professional development.
