Abstracts

A multi phase coupled inductor is an electromagnetic component specifically designed for use in multi-phase power conversion systems, where multiple interleaved switching stages operate in parallel to share current and improve overall efficiency, power density, and transient response. Unlike discrete inductors, this device consists of multiple windings magnetically coupled on a common core, enabling mutual inductance that reduces ripple current, minimizes core losses, and allows for more compact designs in applications such as voltage regulator modules (VRMs), point-of-load converters, and high-current DC-DC power supplies for computing, telecommunications, and industrial equipment.

The global Multi Phase Coupled Inductor market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
