Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-service Aggregation Router competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A multi-service aggregation router is a high-performance network device deployed at the aggregation layer of operators, at the edge of metropolitan area networks, or at the core nodes of large enterprise wide area networks. It is designed to unify the access, carrying, and forwarding of multiple services (IP data, voice, video, MPLS VPN, SD-WAN, IoT traffic, etc.). It usually adopts a modular slot design, which can flexibly load interface boards (such as Gigabit/10 Gigabit Ethernet, fiber, TDM, wireless) according to business needs, and runs a multi-service processing engine on a unified hardware platform, supporting multi-protocol label switching (MPLS), service quality (QoS) classification, access control list (ACL), advanced routing protocols (OSPF/BGP/ISIS), multipoint multicast (PIM-SM/PIM-DM), network security (firewall, DDoS protection), and programmable automation (SDN south-bound API). With high-density ports, line-speed forwarding, deep packet inspection (DPI) and policy routing, multi-service aggregation routers can achieve refined scheduling and protection of different types of traffic, ensuring efficient and reliable delivery of various services on the same physical network. As the network evolves towards unified bearer, hyper-convergence and cloudification, this type of equipment is continuing to evolve to support IPv6, SR-MPLS/SRv6, EVPN-VXLAN, converged MPLS/Transport API and cloud-native SD-WAN architecture.

The global Multi-service Aggregation Router market size was estimated at USD 544.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
