## Abstracts

A multi-spectral surveillance camera is a camera device that can simultaneously capture images of multiple spectral bands. It is different from traditional RGB cameras, which can only capture images in the visible light range. Multispectral surveillance cameras are capable of capturing information within a wider spectral range, including bands beyond visible light such as infrared and ultraviolet light. These different bands correspond to different wavelength ranges, which can reveal the characteristics of objects in the invisible spectrum and provide richer information for monitoring and analysis.

The global Multi-spectral Surveillance Camera market size was estimated at USD 508.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
