Report Overview

Multi sphere neutron spectrometer (MARS) is a neutron spectrometer used for measuring neutron energy spectrum. It is designed to measure Neutron flux and energy distribution in a wide energy range, usually from several hundred keV to several MeV. MARS consists of a set of nested spherical shells made of different materials, such as polyethylene, lithium, and bismuth. These shells are designed to slow down and capture neutrons of different energies, thereby determining the energy spectrum of neutrons by measuring the number of neutrons captured in each shell.
