## Abstracts

A multi-spindle automatic machine is a type of precision machine tool used in mass production to simultaneously perform multiple operations, such as drilling, threading, turning, or milling, on a workpiece. These machines have multiple spindles (usually ranging from 2 to 8 or more) arranged in a circular or linear configuration. Each spindle holds a workpiece and moves through various machining stations, allowing different processes to be performed on the same part simultaneously, significantly improving production speed and efficiency. Common in industries such as automotive and aerospace, these machines are typically controlled by a cam mechanism or computer numerical control (CNC) systems, ensuring high repeatability and precision in producing identical parts. Their automatic nature means they require minimal human intervention once set up, making them ideal for large-volume manufacturing.

The global Multi-spindle Automatic Machine market size was estimated at USD 2604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
