Abstracts

Filament winding consists of winding continuous rovings of fiber onto a rotating mandrel in predetermined patterns. Filament winding machine is the main equipment of filament winding technology. The design and performance of filament winding products should be realized by winding machine. Multi-axis winding machine is a kind of machine equipment used to manufacture composite material products. It is mainly used for winding fiber materials (such as glass fiber, carbon fiber, etc.) and corrosion-resistant composite components. These components are often found in a wide range of applications in aerospace, automotive, energy, sports equipment, and more. Multi-spindle winding machines are usually equipped with multiple winding shafts, which can simultaneously perform winding processing of multiple fibers to improve production efficiency. The machine uses computer control to wind the fiber material on the mold or substrate according to specific angles and layers to form a predetermined component shape.

The global Multi-spindle Filament Winding Machine market size was estimated at USD 173.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
