## Abstracts

There are multiple cleaning tanks inside the multi-stage ultrasonic cleaners. Each cleaning tank can set different ultrasonic frequency, power, cleaning time and other parameters, and can also be equipped with different cleaning liquids to meet the requirements of different cleaning stages and cleaning objects. Multi-stage ultrasonic cleaning machines usually have 2-5 cleaning tanks. The size and shape of each cleaning tank can be designed according to actual needs to adapt to cleaning objects of different sizes and shapes. For cleaning small precision parts, the cleaning tank can be designed to be smaller and deeper to facilitate the soaking and cleaning of parts; for cleaning large industrial parts, the cleaning tank can be designed to be larger and shallower to meet the placement and cleaning requirements of parts. Due to its multi-stage cleaning characteristics, the multi-stage ultrasonic cleaner can carry out targeted cleaning for different dirt and cleaning objects, and the cleaning effect is more thorough. By reasonably setting the parameters of each cleaning tank, the cleaning object can be protected from damage to the greatest extent while removing dirt.

The global Multi-Stage Ultrasonic Cleaners market size was estimated at USD 672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
