Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi Stereo Line Mixer (MSLM) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A multi stereo line mixer (MSLM) is an audio device dedicated to mixing, gain control and output management of multi-channel audio line signals (such as synthesizers, sound source players, electronic drum modules, etc.). It usually has multiple stereo input channels and provides interfaces such as main output, auxiliary output (Aux), and headphone monitoring. Unlike traditional microphone mixers, stereo line mixers mainly process line-level signals, do not have microphone amplifiers, and are not used for pickup. Instead, they are more suitable for high-fidelity, low-noise audio signal management and synthesis in music production, stage performances, broadcasting systems, commercial background music, and personal recording studios. Some high-end models also support multi-channel equalization, effect routing, USB audio interface and other functions, and are suitable for professional audio application scenarios that require flexible signal integration and real-time monitoring.

The global Multi Stereo Line Mixer (MSLM) market size was estimated at USD 470.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
