### Report Overview

Multi-storey car parks, also called automated (car) parking system (APS), is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an APS is more similar to an automated storage and retrieval system for cars.

The global Multi-storey Parking Garage market size was estimated at USD 4536.20 million in 2023 and is projected to reach USD 5816.08 million by 2032, exhibiting a CAGR of 2.80% during the forecast period.
