Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multi-unit Abutment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A multi-unit abutment (MUA) is an abutment most commonly used with dental implants in "All-on-Four" protocols. They are designed for screw-retained group restorations, which are often used in combination with angled dental implants and whole arch replacements, as well as screw fixation of bridges made of zirconium or metal-ceramic group restorations to the implant. Factors such as the increasing geriatric population that is suffering from oral diseases, evolving medical tourism concerning dental treatment, and the launch of multiple government initiatives for public oral health care are expected to drive industry expansion. Moreover, the introduction of advanced and efficient dental products by major companies is also fueling market growth. Companies like DENTSPLY Sirona, Planmeca Oy, and Danaher Corp., are introducing advanced computer-aided imaging technology that will allow professionals to prepare a precise course of dental treatment. While the industry expected to see positive changes in the safe delivery of dental care, an increase in the cost of availing care is imminent. According to the FDI World Dental Federation, oral diseases impact 3.9 billion people worldwide, with untreated tooth decay (dental caries) impacting more than half of the global population (44%), making it the most prevalent of all the 291 conditions included in the Global Burden of Disease Study.

The global Multi-unit Abutment market size was estimated at USD 706.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
