Report Overview:

With the Multi Beam Scanner (MBS), a fixed beam arrangement is generated in the processing plane of the scanning system. The number of beams and their arrangement can be tailored for the application. This approach allows the process speed to be multiplied when producing periodic repetitive structures. Based on a diffractive beam splitter, the power of the laser system can be divided into up to 100 partial beams and more. This makes it possible to overcome the performance limitations of many USP processes and thus to increase the process efficiency considerably. Areas of application are in the area of laser drilling, the parallel processing of several components or the general parallelization of laser processes.

The Global Multibeam Scanner Market Size was estimated at USD 249.50 million in 2023 and is projected to reach USD 344.02 million by 2029, exhibiting a CAGR of 5.50% during the forecast period.
