Abstracts

The multi-cavity magnetron sputtering optical coating machine is a high-end optical coating equipment that combines magnetron sputtering technology with a multi-cavity structure. The equipment uses magnetic field-enhanced glow discharge to bombard the target material through plasma in a high vacuum environment, so that the target atoms are sputtered and deposited on the surface of the optical substrate, thereby forming a high-density, high-uniformity functional film. The "multi-cavity" structure usually refers to multiple independent coating chambers or process sections, which can realize the continuous deposition of multiple materials and multi-layer film systems, improve production efficiency and film combination flexibility, reduce cross contamination, and is especially suitable for the preparation of precision optical films such as anti-reflection films, reflective films, and filter films.

The global Multicavity Magnetron Sputtering Optical Coating Machine market size was estimated at USD 1227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
