Abstracts

Multifunctional dynamic DR is an advanced medical X-ray diagnostic equipment. Compared with traditional single-function DR equipment, it integrates multiple functions such as film taking, fluoroscopy and imaging. This equipment can perform high-speed, real-time spot film collection for special lesion locations and capture high-definition lesion images, thereby significantly reducing the risk of missed diagnosis and misdiagnosis. In addition, the multifunctional dynamic DR supports multi-angle projection and allows the SID (source-image distance) to move flexibly within a wide range, making it capable of various general and special imaging examination tasks, including but not limited to esophagography, digestive examination Tract angiography, double contrast colon angiography, T-tube angiography and intravenous pyelography (IVP), etc.

The global Multifunctional Dynamic DR market size was estimated at USD 1475.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
