Report Overview

A multi-jet modeling 3D printer ejects a liquid material, which then solidifies as it cools. They are equipped with multiple print heads, one of which is used to manufacture a material (such as wax) at the same time as the part. The material is sprayed layer by layer and molded by chemical resin, hot melt material and light curing. Build high-accuracy, high-definition models and prototypes for proof-of-concept, functional testing, prototyping of molds, direct investment casting. The parts produced are very precise and can be made from a variety of materials depending on the number of print heads. The technology is particularly suitable for jewelry making and mold making.
