Abstracts

A Multilateration System is a passive positioning technique that determines the location of a signal-emitting source by measuring the time differences of arrival (TDOA) of its signals at multiple, geographically dispersed receivers. Unlike radar, it does not actively illuminate the target?rather, it ?listens? for transmissions (e.g., transponder pulses, radio beacons, wireless signals) and computes position from timing data.

The global Multilateration (MLAT) System market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
