Abstracts

Vacuum bagging film is a multi-layer composite special film, which refers to a process auxiliary material that is cured and molded using composite material components. It is a film material that can form and maintain a vacuum state under certain environmental conditions. The function of the vacuum bag film is to form a vacuum system. Vacuum bag film has high strength and high elongation, and can directly contact resin. It is mainly used for normal temperature molding, vacuum injection and pre-compaction of composite materials. According to the product process, it can be divided into dry vacuum bag technology bag film and wet vacuum bag technology bag film. The preferred material of choice for vacuum bagging films is nylon due to its very low gas permeability combined with its strength, flexibility, elongation and high temperature resistance.

The global Multilayer Co Extrusion Vacuum Bagging Film market size was estimated at USD 544.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
