Report Overview

Usually thick copper foil (copper thickness 3OZ and above) or any layer of copper in the finished product will be used pcb with a thickness of 3OZ and above are collectively referred to as thick copper boards. Thick copper plate has the characteristics of carrying high current and high voltage, and has good heat dissipation performance. It is widely used in communication power supply, industrial power supply, medical equipment power supply, new energy vehicle power supply and other fields. Due to its thick copper thickness and high requirements for withstand voltage, thick copper plates are difficult to manufacture circuits, and require high density of resin filling and uniformity of medium between lines and layers. During the processing process, etching, lamination, drilling Hole, electroplating and other processes are specially controlled, and the technical realization is difficult.
