The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multilayer Microcapsule Omega-3 Algae Oil Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multi-layer microencapsulated Omega-3 algae oil powder is a powder form in which Omega-3 fatty acids (usually derived from algae oil) are encapsulated in a multi-layer protective shell through microencapsulation technology. This technology can effectively protect Omega-3 fatty acids from environmental factors such as oxidation, light and heat, and extend their stability and shelf life.

Microencapsulation refers to the encapsulation of active substances (such as Omega-3 algae oil) in tiny particles made of one or more materials (usually natural or synthetic polymers, lipids, etc.). The multi-layer structure usually provides different protection effects through different capsule layers, and can accurately control the release rate of Omega-3. This microencapsulated powder form of Omega-3 algae oil is widely used in the fields of health foods, nutritional supplements, food additives, etc., especially for providing high-quality plant-derived Omega-3 fatty acids, suitable for vegetarians or consumers who are sensitive to marine sources. Through this technology, the absorption efficiency of Omega-3 is improved, and the taste and smell of the product can also be better controlled.

The global Multilayer Microcapsule Omega-3 Algae Oil Powder market size was estimated at USD 380.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
