## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multilayer Polymer Optical Waveguides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multilayer Polymer Optical Waveguides are optical guiding components composed of stacked layers of high-transparency polymer films, designed to achieve low-loss and low-crosstalk optical transmission within planar or three-dimensional structures. They are primarily applied in high-speed optical interconnects, integrated photonic circuits, and AR display devices. In 2024, production reached 2.7 million units, with an average price of \$50 per unit. The single-line annual capacity was approximately 5,000 units, and the average gross margin was around 43%. The most critical upstream raw materials are optical-grade polymer and resin substrates such as PMMA, COC, COP, or photosensitive polymers. Representative suppliers include Evonik, Arkema, TOPAS, Zeon, Mitsubishi Chemical, and Kingfa Sci. & Tech. The midstream focuses on multilayer film deposition, photolithography or imprint molding, precision alignment, optical polishing and coating, optical and dimensional testing, and final packaging. The downstream is centered on high-speed optical interconnects, integrated photonic circuits, and AR devices, with representative customers including Intel, NVIDIA, Apple, Meta, Microsoft, Sony, Goertek, Sunny Optical, and Luxshare Precision.

The global Multilayer Polymer Optical Waveguides market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.00% during the forecast period.
