Abstracts

The multi-layer stenter is a special equipment for textile finishing. It stretches the warp and weft yarns simultaneously to a plane through mechanical force, and then performs a stenting treatment at high temperature. This treatment can rearrange and fix the fiber structure of the textile, thereby achieving better dimensional stability, flatness and appearance. The multi-layer design can process multiple layers of fabric at the same time, improve production efficiency, and is suitable for high-volume demand scenarios. It is widely used in the textile processing industry.

The global Multilayer Stenter market size was estimated at USD 304.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
