In 2024, global Multilayer Varistors for Automotive production reached approximately 796 M units, with an average global market price of around US\$ 0.12 per unit. Multilayer varistors (MLVs) for automotive are electronic components that protect automotive electronic systems from voltage spikes. Voltage spikes can be caused by a variety of factors, such as lightning strikes, power outages, and switching operations. Multilayer varistors are made up of layers of ceramic material that are stacked together and sintered to form a solid block. The ceramic material has a non-linear electrical resistance, which means that its resistance decreases as the applied voltage increases. This makes Multilayer varistors ideal for protecting electronic systems from voltage spikes. The multilayer varistors for automotive market is expected to grow significantly in the coming years. This growth is attributed to a number of factors, including: Increasing demand for automotive electronics: The demand for automotive electronics is increasing rapidly, driven by the growing adoption of advanced driver assistance systems (ADAS), infotainment systems, and autonomous driving technologies. Multilayer varistors are essential for protecting these sensitive electronic systems from voltage spikes. Growing electrification of vehicles: The electrification of vehicles is another major trend driving the growth of the Multilayer varistors for automotive market. Electric vehicles contain a large number of electronic components that need to be protected from voltage spikes. Stricter government regulations: Governments around the world are implementing stricter regulations on safety and emissions in the automotive industry. This is leading to increased demand for automotive electronics, including Multilayer varistors. Overall, the Multilayer varistors for automotive market is a promising market with a lot of growth

potential. The market is being driven by a number of factors, including the increasing demand for automotive electronics, the growing electrification of vehicles, and stricter government regulations.
