Report Overview

Multilayer zirconia blocks are a type of dental ceramic that is made up of multiple layers of zirconia, each with a different shade and translucency. This allows the dentist to create restorations that have a natural-looking gradient of color and translucency, just like natural teeth. Multilayer zirconia blocks are typically made using a computer-aided design and computer-aided manufacturing (CAD/CAM) process. The dentist first scans the patient's teeth to create a digital model. The digital model is then used to design the restoration. Once the restoration is designed, it is milled from a multilayer zirconia block.
