Abstracts

A multilumen arterial catheter is a specialized medical device designed for insertion into an artery to allow for continuous blood pressure monitoring, frequent arterial blood sampling, and simultaneous administration of medications or fluids. It features multiple independent channels (lumens) within a single catheter, enabling clinicians to perform several functions at once without the need for multiple insertions, thereby reducing patient discomfort and the risk of complications such as infection or vessel damage. These catheters are typically constructed from biocompatible materials like polyurethane or silicone and are equipped with pressure transducers and flush systems to maintain patency and accuracy in critical care settings such as intensive care units (ICUs), operating rooms, and emergency departments.
