Abstracts

Multimode fiber bundles consist of multiple optical fibers grouped together within a single protective sheath, designed to transmit multiple signals or a high volume of data simultaneously over short to medium distances, typically within data centers, local area networks (LANs), medical imaging devices, and industrial sensing applications; these bundles leverage the principle of propagating light through a larger core diameter compared to single-mode fibers, allowing for the use of cost-effective light sources like LEDs or VCSELs and simplifying connectivity, though they are subject to modal dispersion which limits their use in long-haul communications.

The global Multimode Fiber Bundles market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
