Abstracts

Multimode fiber cable, a type of optical fiber designed to carry multiple light rays or modes simultaneously, is characterized by its relatively large core diameter (typically 50 or 62.5 micrometers) which allows for simpler and more cost-effective connections compared to single-mode fiber. It is primarily used for short-distance data transmission applications, such as within data centers, local area networks (LANs), campus backbones, and enterprise environments, where its higher bandwidth capacity over copper alternatives and lower installation costs make it a preferred choice for high-speed networking over distances generally not exceeding 550 meters (depending on the standard and data rate). The cable leverages light-emitting diodes (LEDs) or vertical-cavity surface-emitting lasers (VCSELs) as light sources, supporting protocols including Ethernet, Fibre Channel, and InfiniBand.

The global Multimode Fiber Cable market size was estimated at USD 4550.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.75% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Multimode Fiber Cable market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
