Report Overview

Fiber coupler (Coupler), also known as splitter (Splitter), connector, adapter, fiber flange, is used to achieve optical signal splitting/combining, or to extend the fiber link components, multi-mode fiber coupling. The principle and structure of the filter are basically similar to the fiber coupler, except that the grinding and polishing device requires strong coupling, so the grinding and polishing plane enters the fiber core. On the basis of the polished 2x2 fiber coupler, an adjustable coupler can also be made. In the case of a certain wavelength, the coupling ratio changes with the angle formed by the two polished fibers. Therefore, the relative direction of the two fibers can be adjusted to change the coupling ratio. In the local fiber optic network or other occasions, 1xN, Nx1 couplers or NxM coupler (or star coupler), where the first number represents the number of input terminals, and the second number represents the number of output terminals. These couplers are all made by fusion-drawing method.
