Abstracts

Multimode fiber optic cables are a type of optical fiber designed to carry multiple light rays or modes simultaneously, each traveling along slightly different paths within the fiber core, making them particularly well-suited for short-distance, high-bandwidth data transmission applications such as local area networks (LANs), data centers, and enterprise backbones, where their ability to support high data rates over relatively limited distances (typically up to 550 meters for 10 Gbps using OM4 fiber) provides a cost-effective alternative to single-mode fibers, while their larger core size simplifies connectivity and reduces installation expenses due to greater tolerance for misalignment and the use of lower-cost light sources like vertical-cavity surface-emitting lasers (VCSELs).

The global Multimode Fiber Optic Cables market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
