Abstracts

A multimode terahertz quantum cascade laser is a special type of laser that produces continuous wave laser radiation in the terahertz frequency range. Terahertz waves are electromagnetic radiation located between infrared light and microwaves in the electromagnetic spectrum, with a frequency range of approximately 0.1 to 10 terahertz. Multimode terahertz quantum cascade laser is a laser based on quantum cascade structure, which uses quantum cascade technology to realize the generation and amplification of terahertz waves in semiconductor materials. The laser is characterized by wide bandwidth and multi-mode operation in the terahertz frequency range. Traditional terahertz lasers are usually single-mode, that is, they can only produce terahertz radiation of a single frequency. The multi-mode terahertz quantum cascade laser can simultaneously generate terahertz radiation of multiple frequencies in the terahertz frequency range by optimizing the laser structure and material parameters. This multi-mode operation makes this laser more flexible and functional in the research and application of the terahertz frequency spectrum. Multimode terahertz quantum cascade lasers have broad application potential in terahertz spectroscopy, imaging, communication, and sensing. It can be used in various application scenarios such as spectral analysis, non-destructive testing, security inspection, and biomedical imaging in the terahertz frequency band, which promotes the development and application expansion of terahertz technology.

The global Multimode Terahertz Quantum Cascade Laser market size was estimated at USD 145.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
