Abstracts

Multiple-Effect Evaporator (MEE) is designed to concentrate solutions by efficiently evaporating a solvent (typically water) using a series of evaporation stages?called ?effects.? Each stage operates at progressively lower pressures and temperatures, allowing the vapor generated in one effect to serve as the heating source for the next. This cascading reuse of heat significantly boosts energy efficiency compared to single-effect systems.The system is usually provided in the form of a project, including design, production and installation.
