### Report Overview

Windows serve as the most important elements of a building's thermal cover; helping control sound, providing aesthetics, natural ventilation and letting in light. Glazed windows are high-performing windows that help in lowering heat losses, minimize condensation and air leakage. Glazed windows are reserved for the buildings of the highest stature. Glazed windows are now available in a variety of choices, for instance, single glazing, double glazing and triple glazing depending on its application. They are further characterized as low-e and high-gas or both. High pricing of multiple glazed windows is a drawback for its growth in the market. At present, most of the countries use double glazing windows, which are expected to be replaced by triple low-emissivity glazing windows in the near future.

The national policies & regulations to focus on energy efficiency and increase in demand for energy-efficient windows is making it necessary to use multiple glazing windows in the end-user industry thereby, fueling the demand for multiple glazing windows in the global market.
