The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Multistage Pipeline Circulation Pump competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Multistage inline circulation pumps are circulation pumps that utilize a multistage impeller series structure to achieve high-lift liquid transport. They are widely used in high-rise building water supply, central air conditioning cooling circulation, boiler feedwater systems, and industrial cooling processes, featuring high head, stable operation, high energy efficiency, and small footprint. In 2024, global sales of multistage inline circulation pumps were approximately 850,000 units, with an average unit price of approximately US\$380. A typical single-line annual production capacity was approximately 45,000 units. Upstream companies are mainly concentrated in motor and bearing manufacturing, stainless steel casting processing, seal and impeller manufacturing, and variable frequency drive modules and control systems. Downstream companies are mainly building HVAC contractors, water treatment and energy-saving engineering companies, industrial fluid equipment manufacturers, and municipal water supply system integrators. The product's gross profit margin is approximately 30%, with raw materials and castings accounting for approximately 55% of the product cost structure, motors and control systems accounting for approximately 25%, machining and assembly accounting for approximately 12%, and testing, packaging, and logistics accounting for approximately 8%. According to parameters, it can be divided into small flow high head type, medium flow medium head type and large flow high head type; according to structure, it can be divided into vertical multistage, horizontal multistage and split design; according to control method, it can be divided into constant speed type and variable frequency intelligent speed regulation type; according to material, it can be divided into cast iron, stainless steel and alloy corrosion resistant type; according to

application scenario, it can be divided into building water supply circulation, HVAC circulation, industrial cooling circulation and boiler makeup water system special type, etc.
