Report Overview:

Multistage side channel blowers are similar to single stage side channel blowers but differ in terms of construction and functionality. While single stage blowers typically consist of only one set of rotor/impeller blades and a stator blade assembly, multistage blowers usually contain two or more sets of rotor/impeller blades separated by stationary vanes. This allows them to achieve higher efficiency and capacity through better pressure handling capabilities. Additionally, multistage blowers often incorporate additional components such as diffusers to further improve aerodynamic performance and reduce energy consumption.

The Global Multistage Side Channel Blowers Market Size was estimated at USD 148.33 million in 2023 and is projected to reach USD 196.51 million by 2029, exhibiting a CAGR of 4.80% during the forecast period.
