Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mumetal Bars competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mumetal bars are solid, rod-shaped components made from Mumetal, a nickel-iron soft magnetic alloy primarily composed of approximately 77% nickel, 16% iron, 5% copper, and 2% chromium or molybdenum. These bars are designed to offer exceptional magnetic shielding due to their very high magnetic permeability, which allows them to efficiently absorb and redirect low-frequency magnetic fields. Mumetal bars are typically used in electromagnetic interference (EMI) shielding applications, such as shielding sensitive electronic instruments, medical imaging equipment (e.g., MRI), transformers, and scientific devices from external magnetic interference. They are also employed in the construction of magnetic shields, enclosures, or cores, especially where linear or shaped magnetic pathways are required. Due to their high permeability and low coercivity, Mumetal bars are often annealed in a hydrogen atmosphere to optimize their magnetic properties, enhancing their performance in shielding and magnetic flux guidance applications.

The global Mumetal Bars market size was estimated at USD 346.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
