## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mumetal Foils competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mumetal foils are thin, flexible sheets made from Mumetal, a soft ferromagnetic alloy primarily composed of nickel (77-80%), iron (15%), copper, and molybdenum. These foils are specifically engineered to provide high magnetic permeability, enabling them to efficiently shield against low-frequency magnetic fields (typically below 100 kHz). Mumetal foils are widely used in applications where compact, lightweight, and effective magnetic shielding is required, such as in electronic instrumentation, MRI scanners, transformers, sensors, and aerospace electronics. They are often annealed in a hydrogen atmosphere to maximize their shielding performance.

The global Mumetal Foils market size was estimated at USD 74.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mumetal Foils market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
