Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mumetal competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mumetal is a high-permeability nickel-iron soft magnetic alloy primarily composed of approximately 77% nickel, 16% iron, 5% copper, and 2% chromium or molybdenum. It is specially designed to have very high magnetic permeability, making it exceptionally effective at shielding low-frequency magnetic fields (such as those from transformers, electric motors, and power lines). Mumetal is widely used in magnetic shielding applications because it can attract and redirect magnetic field lines, effectively protecting sensitive electronic equipment from magnetic interference. However, its shielding properties depend on careful heat treatment (annealing), which aligns the grains and reduces internal stresses to optimize magnetic performance.

The global Mumetal market size was estimated at USD 658.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mumetal market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.

The insights provided enable readers to understand the competitive dynamics within the industry and formulate effective strategies to enhance profitability and market
