Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mumetal Sheets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. MuMetal sheets are thin, flat metallic materials made primarily from a nickel-iron alloy, typically composed of around 77-80% nickel, 4-5% molybdenum, balance iron, and small amounts of other elements. They are specially engineered for high magnetic permeability, allowing them to efficiently absorb and redirect low-frequency magnetic fields. These sheets are commonly used for magnetic shielding applications, particularly in environments where sensitive electronic equipment must be protected from external magnetic interference (EMI), such as in medical devices (e.g., MRI), audio equipment, scientific instruments, and military electronics. After manufacturing, MuMetal sheets often undergo annealing in a hydrogen atmosphere to optimize their magnetic properties.

The global Mumetal Sheets market size was estimated at USD 93.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mumetal Sheets market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
