### Report Overview

Recycled plastics are the plastics that made from post-consumer or post-industrial plastics instead of the virgin resin. The process of recycling used plastic from consumable products is an efficient means to reprocess the material into useful products. Many different products make great sources of recyclable material, including: soda bottles, plastic packaging, sheets and pellets. Recycled plastic is used to make many different types of products. The type of product that is made out of recycled plastic depends on the type of plastic resin. There are several different types of plastic resin used to make different products, such as PET, PP, HDPE and LDPE. Plastics can be divided into two general categories, thermoplastics and thermosets. Thermoplastics can be mechanically recycled (through application of heat and pressure) into new manufacturing feedstock. Thermosets cannot be mechanically recycled because of chemical bonds binding the plastic molecules (monomers) together. There are two categories of thermoplastics: commodity grade plastics and engineering grade plastics.
