Abstracts

Municipal Solid Waste (MSW) gasification is a process that converts non-recyclable waste materials, such as household garbage, into synthetic gas (syngas) through the application of heat, pressure, and controlled amounts of oxygen or steam. This process typically involves the thermal decomposition of the waste at high temperatures, breaking down organic materials into simpler molecules, which then form syngas. The resulting syngas can be used for various purposes, including electricity generation, heating, or as a feedstock for producing chemicals or fuels. MSW gasification is considered an alternative waste management solution, offering the potential for waste reduction, energy recovery, and lower environmental impacts compared to traditional waste disposal methods like landfilling or incineration.

The global Municipal Solid Waste (MSW) Gasification market size was estimated at USD 94.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
